*Fabienne Monté – breeder Toscana®*

## *The Toscana® breeding program*

In breeding, we focus on plant quality, easy cultivation, outdoor performance and of course a beautiful palette of flower colours.

Breeding is a long process which requires dedication, expertise and eye for detail from our breeders. Our breeding program offers added value right along the chain, from grower to consumer. Drawing on feedback from growers and a continuous innovation process, Florensis strives to further improve the quality of the different varieties and to expand its Toscana® series.

This season we have again some great replacements and introductions to our existing series. In particular I would like to bring the updated green leaved zonal Smart series under your attention. We added the Maria Scarlet, Carla Hot Pink and Nina Pink Eye. Together with the highly appreciated Smart Splash a full colour range is now available in this important series.

*About the Toscana® production*

Toscana® is available as unrooted cuttings (URC) and as young plants. At our production locations in Ethiopia and Kenya we specialize in the URC production of Pelargonium. With a total of 37 hectares of well-equipped greenhouses, which are run by qualified and experienced staff, we supply from both locations a high production standard. This gives you the best quality against the lowest risk in supply change.

Moreover, we think and act sustainably. Our production locations are MPS-A certified (Environmental Programme for Ornamental Horticulture), covering crop protection products, fertilisers, energy, water and waste. Neonicotinoids are banned and to combat the negative effects of crop protection products, we use organic variants and work with Integrated Pest Management (IPM) wherever possible.

## *La Dolce Vita*

It's the small things that make life beautiful:  
a glass of red wine in the sunset,  
a cappuccino in bed or  
a terrace full of outstanding pelargonias.
